Cellulosics: Forest Management Standards for Wood Pulp Raw Materials

AFFINISOL™ Hydroxypropyl methyl cellulose HME
CELSENTIAL™ Hydroxypropyl methylcellulose
ETHOCEL™ Premium, Food and Industrial Grades
METHOCEL™ Premium, Food and Industrial Grades
VITAL-V™ Hydroxypropyl methylcellulose
WELLENCE™ Brand Products

Our company produces products in locations around the world. Each location must meet the standards of excellence for manufacturing, quality control, environmental stewardship, and safety set by our company, regardless of their location.

High purity cellulose derived from soft wood pulp is used as a primary raw material for many of our products. We select pulp suppliers that follow strict protocols for proper forest management practices, such as the Forest Stewardship Council (FSC) Forest Stewardship Standards to ensure that forests are being managed in a way that preserves biological diversity and benefits the lives of local people and workers, while ensuring it sustains economic viability. In all cases, our pulp suppliers have certified for compliance to these internationally recognized standards.

Pesticides are not intentionally added to nor expected to be present in any of the above listed products.

Thank you for your interest in our products. Please be assured that we are committed to providing high quality products and service to our customers.
